SUMMARY

Computer Science Engineering graduate with strong foundations in programming, software development, data analysis, and problem-solving. Experienced with Java, Python, SQL, Spring Boot, Power BI, and modern development tools through internships and projects. Seeking entry-level opportunities to contribute and grow in technology-driven roles.

EDUCATION

K S Institute of Technology, B.Tech in Computer Science Engineering — CGPA: 9/10	2022–2026
Narayana PU College, PCMC — 88.16%	2021–2022
Jyothy Kendriya Vidyalaya, CBSE Class X — 84.2%	2019–2020

SKILLS

Languages: Java, Python, C, SQL
Backend: Spring Boot, REST APIs, Microservices
Analytics: Power BI, Tableau, Excel, Pandas, NumPy, scikit-learn
Databases: MySQL, SQL Server, MongoDB
Tools: Git, GitHub, Jupyter Notebook

EXPERIENCE

Mphasis — Associate Software Engineer Trainee Intern - Developed microservices-based applications and REST APIs using Java and Spring Boot. - Contributed to backend development for Invoice & Billing System and MediSure projects. - Performed API integration, testing, debugging, and feature implementation in Agile environments. - Collaborated with teams to improve application functionality and code quality.	Feb 2026 – May 2026
---	---------------------

ICT Academy (IBM) Completed industry-focused Data Analytics training conducted in collaboration with IBM.	Nov 2025 – Dec 2025
--	---------------------

PROJECTS

SaaS User Funnel Optimization & Activation Analysis <i>SQL (CTEs), Python, scikit-learn, Power BI</i> - Analyzed 1.5M+ SaaS user events and identified a 57% activation drop-off in the onboarding funnel. - Built user segmentation and logistic regression models to predict activation likelihood. - Developed dashboards delivering actionable insights that reduced time-to-activation by approximately 11.5 days.	GitHub
Smart Traffic Congestion & Accident Hotspot Analyzer <i>Python, Pandas, MySQL, Power BI</i> - Analyzed 50K+ traffic records to identify congestion trends and accident-prone zones. - Developed dashboards providing real-time traffic and safety insights.	GitHub
Profitability Analysis of E-commerce Promotions <i>Python, Excel, Power BI, Pandas</i> - Evaluated 400K+ transactions to assess promotional campaign effectiveness and profitability. - Recommended cost-optimization strategies through business intelligence dashboards.	GitHub
3D Face Recognition under Occlusion <i>Python, OpenCV, TensorFlow, NumPy</i> - Implemented PCA and CNN-based models for partially occluded face recognition. - Achieved 90% accuracy through model tuning and evaluation.	GitHub

ACHIEVEMENTS

Finalist — CODE CUBICLE 5.0 Hackathon
Built a GenAI-powered solution using Retrieval-Augmented Generation (RAG), Pathway, and TRAE, advancing to the final round among participating teams.

PUBLICATION

A Survey on Multimodal Approaches for 3D Face Recognition in Occluded Environments
IJARCCE, Vol. 14, Issue 6, June 2025
DOI: 10.17148/IJARCCE.2025.14655

CERTIFICATIONS

Data Analyst Bootcamp (Udemy) • Python Basics (Coursera) • Artificial Intelligence (CodSoft) • Java Essentials (Infosys Springboard)
